

Dashboards and Reports Builder

The ability to build custom dashboards and reports is a key functionality of the Observer® Performance Management Platform. It allows you to start your day with a bird's eye view of overall IT business operations. It is the entry point for your network analysis and troubleshooting drilldown—making it a vital element of your program's configuration.

Did You Know:

Companies that take advantage of Viavi Solutions® Consulting use twice as many performance management features on average

Trained consultants will facilitate discussions with your team to identify the key business systems and metrics vital to your organization's success. These key performance indicators will be mapped into simple dashboards and reports that your team can use to judge the success of your systems, and identify potential risks.

How It Works

Organizational goals will be documented, implementation plans will be created, and the reports and dashboards will be designed to your specifications. Two of your staff members will participate in a knowledge transfer process so they can understand and replicate it effectively. The Virtual Service consists of 2 half-day remote sessions, while the On-Site Service is up to 2 days. It includes configuration of dashboards and reports up to 4 total per package.

What You Get

Here are some of the areas that this service addresses:

- Application study
- Reports and dashboards
- Training

On-Site Service

Up to 2 days on site

Virtual Service

Up to two 4-hour sessions via web meeting
