Get VIAVI Certified

Become a Cable and Antenna Sweep Expert
with VIAVI CellAdvisor Training and Certification

You may already have experience with cable and antenna analysis, but do you want to expand your skills and build your credentials?

With VIAVI, you now can combine your expertise with the benefits of certification by taking VIAVI Cable and Antenna Analysis Technician Certification featuring the CellAdvisor™ JD720 Series.

This two-day, instructor-led course for cell site technicians provides hands-on experience with the VIAVI CellAdvisor Cable and Antenna Analyzer (CAA), the industry's leading integrated solution for line sweep measurement, RF / optical power measurements, and fiber inspection. Installing fiber-to-the-antenna cell sites is an increasingly complex job. Technicians and site engineers must inspect every fiber connection and take optical power measurements in addition to performing cable and antenna validation.

VIAVI certification builds the necessary knowledge, skills, and competency you need to verify cell site infrastructure effectively. By maximizing your efficient use of cable and antenna analysis tools and techniques, this training and certification helps you consistently and accurately close out installs every time, on time.

Key Benefits

- Install and validate cell site infrastructure efficiently and consistently
- Reduce overall installation cost and time by learning the finer points of installation from experienced field engineers
- Close out cell site installs quickly and get paid on time

Who Should Attend

- Wireless Operators
- Network OEMs
- Tower Companies
- Field Engineers
- Installers
- Operations Managers

The VIAVI CellAdvisor CAA Certification program reinforces learning with practical, hands-on labs that teach proper installation steps for all aspects of cable and antenna validation. You also will learn how to use the VIAVI JD720 Series Cable and Antenna Analyzer efficiently, reducing testing time in the field, and overall project costs.

VIAVI Cable and Antenna Analysis certification will prepare you to:

• Inspect fiber

• Take and interpret optical power measurements

• Perform comprehensive cable sweep

   - Reflection test

   - DTF test

   - 1-Port cable loss test

   - 2-Port transmission test

   - CW signal generation

   - RF power test

Written and lab examinations are administered on-site on day two of the program. Upon successful completion of the examinations, you will be awarded a certificate and wallet card to document your achievement.
