VIAVI

TrueSite™ Software for Handheld Applications Testing

One-month to one-year floating licenses

This market-leading Viavi Solutions™ handheld optimization solution now tests user applications such as Facebook™, Twitter™, Skype™, WhatsApp™, and SpeedTest™.
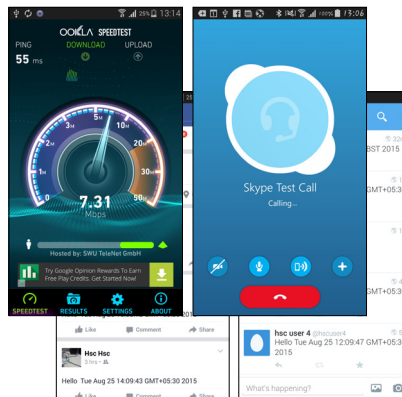

Now you can validate end-user experience while still measuring RF network performance!
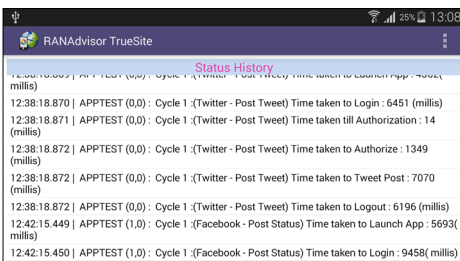

Key Benefits

- Verify end-user experience using mobile applications — test using the applications your customer uses, and understand how they experience your network

- Benchmark performance — monitor how network changes affect applications and how your performance compares with your competitors

- Troubleshoot service issues vs. RF network issues — log both application and RF network performance to pinpoint where issues occur

Easily create test sequences and visually monitor the status of each test

Watch repeatable, automated interactions with the real applications on the device

Log key event and timing parameters that matter to your customers

KPIs for Supported Applications

Facebook
Time taken to launch app
Time taken to login
Time taken to logout
Time taken to post status and validate on wall
Time taken to post image and validate on wall
Time taken to post video and validate on wall

Twitter
Time taken to launch app
Time taken till authorization
Time taken to authorize
Time taken to login
Time taken to logout
Time taken to tweet post
Time taken to tweet image

WhatsApp
Time taken to launch app
Time taken to deliver message
Time taken to refresh contacts

Skype
Time taken to launch app
Time taken to login
Time taken to establish/connect audio call
Time taken to establish/connect video call
Time taken to logout

Ookla SpeedTest
Time taken to launch app
Ping
Upload throughput (Mbps)
Download throughput (Mbps)
Server location
Server name
Time taken for all tests completion
