Mr. Ed Gastle
Product Line Manager
JDSU

Subject: JDSU Certifier40G Approval

Dear Ed,
Effective immediately, Siemon is pleased to announce the approval of the JDSU Certifier40G NGC-4500-FA. This approval is based upon evaluation of the Certifier40G versus network analyzer by Siemon Labs.

Certifier40G is approved for use in both Permanent Link and Channel certification testing with all of our Class FA, and Class F system warranties.

For Class FA systems, the approval includes all parameters to the frequency range of 1000MHz. Certifier40G measurements above 1000MHz were also found to have good correlation with network analyser, and can be used for information.

The following configuration of Certifier40G is required.

NGC-4500-FA-xx software version 3.6 or higher
Certifier40GReporter software version 3.6 or higher

Channel testing for Class FA, Class F	NGC-4500-TERACH2 – pair of TERA channel adapters
Permanent Link testing for Class FA, Class F	NGC-4500-TERAL2 – pair of TERA Permanent Link adapters

We will be notifying our global listing of authorized installers of this approval and will update our Field Testing requirements to include the Certifier40G. This information will be posted on our website at http://www.siemon.com/int/field_testing/jdsu.pdf.

We look forward to our continued partnership.

Sincerely,

Brian Ceella
