Although there are multiple ways to upgrade your Xgig Analyzer firmware, the easiest and most straight-forward path to do that is to upgrade through the Trace Control application.  To upgrade, follow the steps below:

1. Power on the Xgig Analyzer.
2. Start the Xgig Trace Control application on your PC.
3. Click on the Xgig Discovery icon, located on the top left corner.  This will open up a new window.

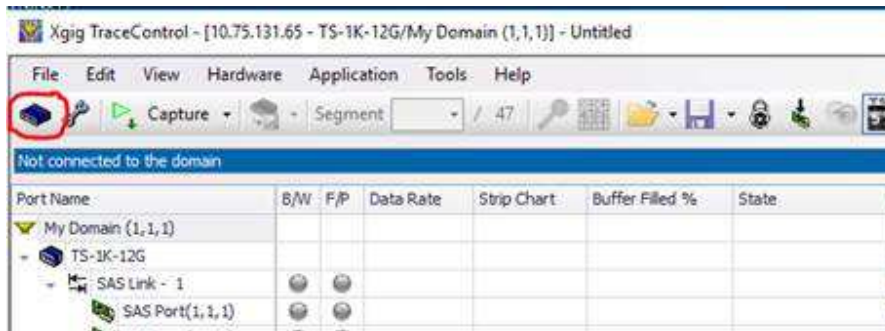

4. In the "Select Ports for Domain Creation" window, select your chassis by single left-clicking on it.  This will populate a larger picture of the chassis on the right-hand side.

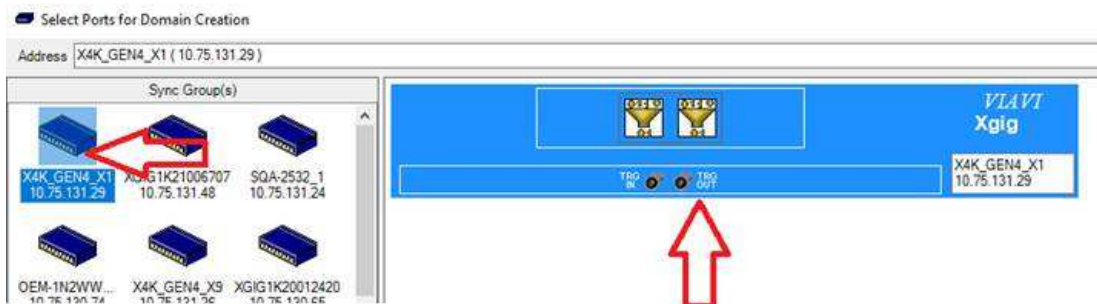

5. Next, single left-click on the area indicated with the red star.  Then, select "Upgrade Sync Group with the latest System/AppKit…"
6.
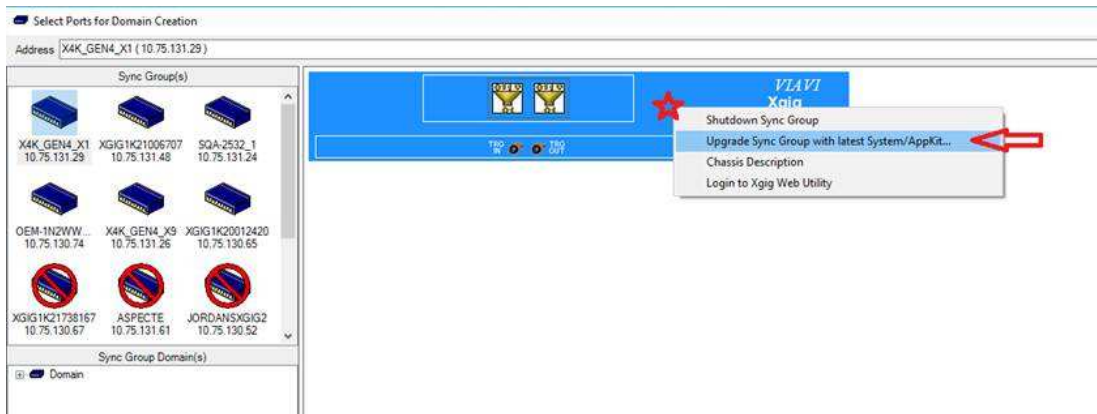

7.  From there, follow the prompts.  The Xgig will likely auto-reboot once or twice.  Please allow it to go through it's process without power-cycle manually.
